## PROFESSIONAL SUMMARY

AI/ML Engineer with around 1 year of experience in machine learning and Generative AI applications. Experienced in building LLM evaluation systems, data processing pipelines, and AI applications connected with backend APIs. Strong programming skills in Python and SQL. Familiar with model evaluation and ML inference workflows. Interested in production AI engineering and ML system development.

## EDUCATION

**Master of Technology (M.Tech.), Computer Science with AI and ML**

2024 – 2026

Vellore Institute of Technology, Vellore — CGPA: 9.07

Vellore, India

**Bachelor of Technology (B.Tech.), Computer Science with AI and ML**

2020 – 2024

Jawaharlal Nehru Technological University Hyderabad — CGPA: 7.97

Hyderabad, India

## TECHNICAL SKILLS

**Languages:** Python, SQL, Java

**Core CS:** Data Structures, Algorithms, OOP, DBMS, Operating Systems

**AI/ML:** Machine Learning, NLP, Large Language Models (LLMs), Model Evaluation, RAG (Retrieval-Augmented Generation), Prompt Engineering, Data Preprocessing

**Libraries:** LangChain, FastAPI, Hugging Face, PyTorch, Scikit-learn, NumPy, Pandas, Gradio, DeepEval

**Data & Cloud:** ETL pipelines, Snowflake, Azure OpenAI, AWS, Docker

**Tools:** Git, GitHub, Jupyter Notebook, CI/CD (GitHub Actions), Vector Databases

## PROFESSIONAL EXPERIENCE

**Data Science Intern, PowerSchool India**

Jul 2025 – Present

- Designed and implemented an **LLM evaluation and inference pipeline** using **DeepEval** to assess responses across accuracy, relevance, and hallucination; benchmarked models and improved performance by adopting **Snowflake Cortex (Claude 3.5)**, achieving **40% lower latency** with better response consistency.
- Improved **semantic search and NLP-to-SQL inference workflows** in the **PowerBuddy for Data Analysis** platform during migration from **Snowflake to AWS**, contributing to backend APIs and enabling secure analytics across datasets of **60M+ users**.
- Built and optimized **ETL pipelines** using **Python, SQL, Snowflake, and Azure OpenAI** for batch AI processing, standardizing data and reducing runtime from **30 to 5 minutes (83% improvement)**.
- Identified and resolved a **prompt injection vulnerability** in the **PowerBuddy for Learning** chatbot by integrating Guardrails AI, input sanitization, and prompt hardening, reducing occurrence from **20% to 0%** and eliminating prompt leakage in production.

## PROJECTS

- Anime NLP Analytics Platform** – Subtitle and Character Intelligence : Built a domain-specific NLP application for anime subtitle analysis using **transformer-based models, spaCy NER**, and custom text-classification pipelines. Implemented subtitle preprocessing, **zero-shot theme extraction**, classification, and **character relationship graph generation**. Developed a **Naruto-style chatbot** and integrated all features into an interactive **Gradio** interface for real-time user interaction and model exploration.
- MBTI Personality Classification using BERT and PPO**: Built a reinforcement learning-based text classification model using a **BERT-based actor-critic architecture** with **PPO (Reinforcement Learning from Human Feedback)** for 16-class MBTI classification on chat text. Developed a structured **training pipeline** and **evaluation framework** to compare reinforcement learning-based optimization with supervised learning baselines, achieving **83% accuracy** vs **65% using traditional supervised learning methods**.

## ACHIEVEMENTS & CERTIFICATIONS

- Solved **500+ DSA problems** on [LeetCode](#) and [GeeksForGeeks](#)
- Completed the **IBM AI Engineering Specialization** and earned a **MongoDB badge** for AI-powered search
